ProTrac Work Orders

Shop Repair or Repair done by an outside service are both handled by ProTrac

ProTrac Work Order Process is a complete package that includes maintaining control over work that is done in your shop or sent out to a 3rd Party for Repair.

Either way when the customer calls to find out the status you do not need to be going through a Work Order Tub. Just go to Work Order Search and search for the document by account or sales rep and the work order will be displayed. Each day the Work Order can be updated with parts and Labor.

When it is done a keystroke will convert the work order to an invoice that can be sent out via fax, email, or it can be printed and mailed.

Once invoiced you can find the Work Order by Serial number, Tag Number, Account, Sales Rep, or even by the person who brought the tool, truck or machine in for repair.

Work Orders on ProTrac

This is the first screen of our Work Order.

The first line of the order is virtually free form. The SR can key anything that describes the tool, machine, or vehicle.

In this case it is Gravel Truck that is in need of a new clutch.

As soon as the line was keyed the Question comes up about recording Serial Numbers (31 Alpha Numeric numbers).

This can be mandatory or not depending on your operation.

PRO-POS Part 2
 POS Part 2 PRO ProTrac(R) 8.22.04 MDC pos0009

Back Finish

TAB/BACK-TAB=Navigate

The screen is displayed to key a number that identifies this unit or truck.

If you use tags to ID your repair work, ProTrac can help you keep track with a Tag Number.

With ProTrac you can search for either the serial or tag number. You can also find the unit based on the person who brought it in for repairs.

Once the first line is complete the Sales Rep can select the Note button and this screen will be displayed. This note has 4 lines of 30 that will print on the Work Order and the Invoice.

PRO-POS Part 2

This Work Order is tacked to the bulletin board in the shop. The mechanic would start a hard copy Work Order that will be given to someone to key in the parts and labor that have been used for this repair. If a job in the shop for 3 days, each day the ticket is updated until it is ready for billing.

It is the end of the day and your mechanic has given the hard copy work order to someone to key in the parts and hours used for this truck today. When there are 20 jobs working then the accounting person can search by the Required Date, Work Order #, Acct #, Sales ID, Ship Name, Job #, or Customer PO.

When the Work Order is selected the next screen would display and Parts and Labor can be keyed.

Press the F12 key to export the order data to Excel.

When the mechanic gives the work order hard copy to accounting to key in today's charges they would go into Order Browse and Select Work Orders. When they select the WO the next screen would display.

Accounting has keyed in today's charges for both parts and labor. The Labor can have a labor rate for each individual mechanic already loaded in the system. It would be just like an inventory item.

If Management varies the Labor rate, you can also assign a labor rate for this WO.

Everyone does this a little differently so we give you options.

ProTrac's Work Order Program

Parts Back Orders: You can Back Order Parts for a WO and when the parts arrive they will be for WO 4985.

To keep paperwork manageable we handle a back order for a WO differently than a normal customer back order.

Contact Mel Carney and find out how we have made this more user friendly.
