ProTrac Inventory Requirement Report

An Analytical Tool for the
Hard Goods Wholesaler

Staying on top of every one of your projects currently requires endless reviews of Excel documents. Those documents have to be done and redone for every job / project.

ProTrac gives our customer a software program to give them a better way to stay up with their inventory obligations to customers

We listened to our customers and rethought the way that a distributor looked at their

- Day to day orders
- Quotes for a project
- Managing their inventory to ensure that the a customer's project was covered with on hand or inventory coming in on a Purchase Order

With our Order Requirement Report a wholesaler can watch:

1. Their day to day orders
2. Special Projects, like new customer openings.
(Inventory must be at a customer's site on a specific day.)

ProTrac's Inventory Needs Analysis

Our customers needed more than just FORECASTING. They needed an Up to The Minute ANALYTICAL TOOL to stay on top of their inventory and inventory commitments.

They wanted to review:

- All Open Orders
- Open Quotes
- Standing Quotes
- Planned Purchase Orders
- Submitted Purchase Orders
- Quantity On-Hand
- All Customer Projects

ALL ON ONE REPORT

We created our **Order Requirements Report** to let our customers see all of their inventory obligations using their own industry knowledge and the power of our powerful 4 GL Relational Data Base.

One of our customers called the Report a Giant **What If Report?**

The wholesaler can review all open orders, Quotes, Submitted and Planned Purchase Orders.

They can review all Open Orders and Quotes by a Category. (Job, Standing Order, Standing Quote, etc.)

The screenshot shows the 'Order Requirements' window with several callouts:

- Order Selection:** Callout: "Order Selection lets you pick what you want to see for this example we are going to review our project with Benton Restaurants".
- Category:** Callout: "Benton is opening a new Marquis Rest in Phoenix It will be opening August 1st".
- What do you want included with this report:** Callout: "Kits".
- PO Selection:** Callout: "What PO's do we have working on this commitment".
- Include current on hand to calculate requirement:** Callout: "In May, knowing what you have in stock for an August Order would be useless information - so you can eliminate the on hand column on the report".
- Bottom left:** Callout: "No Excel documents are required for any of this information".

Footer: Enter category or ? to browse.

ProTrac's Inventory Needs Analysis

For this example we are going to start from the beginning when the Sales Rep creates a Quote for a new opportunity.

Benton Restaurants are opening a new restaurant at the end of June. They have requested a quote. Your SR has created the quote and included the word BENTON as a Category. Now all products will be updated for this Category to keep everyone up to date on this commitment

This quote was created using pricing from our Contract Pricing Module. It was also assigned to a CATEGORY called BENTON. This example of a Category will only have one quote and one sales order and one purchase order. In your real world you will assign multiple quotes, orders and purchase orders to this CATEGORY. Using the CATEGORY function you will eliminate all of the Excel Documents that you currently use to track your inventory commitments to a customer job.

THE Sales Rep ran an order requirement report on the BENTON CATEGORY. This restaurant is opening at the end of June and what you have on hand can be key to fulfilling your commitments.

If the restaurant was going to be opening on the September first, you could have eliminated the on hand column on this report. Today's on hand will have little to no bearing on a September commitment.

P/L Item Number	Description	Qty On Hand	Qty On PO	Cust Qty Ordered	Qty Needed	SPO

INVENTORY REQUIREMENT REPORT

This report came as a result of asking ProTrac for all quotes for the Category called **Benton**, which is for the new **Benton Marquis Restaurant**.

The customer accepted the quote and the next step will turn it into a Sales Order.

The next screen shows how easy this is with ProTrac.

Now that the Quote is a Sales Order, ProTrac is telling you that you only have 20 of the AH 80021 wine glasses and have to order 100, just to fill this customer's order.

For the next screen: Purchasing has run this report and has ordered the wine glasses on a PO that was E Mailed out of ProTrac to the vendor.

This report reviews Open Orders and Purchase Orders to create this report.

You can cover the rest of the order out of your on hand inventory

P/L	Item Number	Description	Qty On Hand	Qty On PO	Cust Qty Ordered	Qty Needed	SPO

PURCHASING will also use this report as part of their planning

As soon as the Quote was turned into an order, then ProTrac caused the Back Ordered Item to be put on the next PO for this vendor.

This PO was sent electronically out to via the Email carrier that you use.

ProTrac's Inventory Needs Analysis

With this report you can easily see that all of the products that the customer has on order for the new restaurant can be covered by:

- On Hand Inventory
- On an Incoming PO

No Excel Documents

To key or rekey

No white boards

Or 18' note pads

With ProTrac the system has all of those notes.

Process Exit

Order Selection lets you pick what you want to see for this example we are going to review our project with Benton Restaurants

What do you want included with this report

Benton is opening a new Marquis Rest in Phoenix It will be opening August 1st

Kits

What PO's do we have working on this commitment

This report can report on submitted and / or planned PO's

No Excel documents are required for any of this information

In May, knowing what you have in stock for an August Order would be useless information - so you can eliminate the on hand column on the report

There are a lot of options when it comes to using the Order Requirement Report. If you want to look at where you stand on all open orders you can display them without a CATEGORY.

ProTrac will show you every item that has been ordered. It also has a report that shows you by item every customer who has this item on order at this time.

To run that report you would click the **Display Order Detail** and ProTrac will print out each item and the customers who purchased this item.

If you need items that are on a PO that you are building but have not submitted yet you would ask ProTrac to look at all Planned PO's

If you are working with a project that is not due for 3 months, you can eliminate the column showing on hand. For a September job, knowing what is on order in May has no impact.

Come the first of August that will become valuable information.

ProTrac's Inventory Requirement report gives you the largest **WHAT IF** report possible. The report does not update anything, it just reports the information on a day's orders, a large project, and what you owe to a customer's project.

ProTrac's Inventory Needs Analysis

ProTrac's Inventory Requirement Report is forging new ground in the world of inventory report writing. In all other reports and programs we use **Linear Thinking** to create the standard reports.

What our customers wanted was the flexibility to make a buying decision that did not always follow Linear Thinking, they wanted to be able to:

- Simply look at all Open Orders and Open PO's for a Product Line and see how they stand with those products
- Or to run the same report to review all **inventory commitments** whether on an Order, Quote, Committed Purchase Order, or CATEGORY.

The Order Requirement report gives our customer the flexibility to make buying decision based on –
Up to the minute

REAL TIME INFORMATION

NO EXCEL Documents that have to be redone time and time again.

Mel Carney
800-711-7374

Linear Thinking is a Process of thought, which follows a known cycle or step-by-step progression.

Accounting and Inventory reports demand a step by step though the process. Each step in the report must be taken and completed before the next step is taken.

In a "What IF" report, the logic is changed to let the user decide what information they need and how they want their information presented.
